An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: Title has been changed to "Liquid crystal display with side electrodes coplanar with the pixel electrodes"

Response to Arguments

Previously rejected amended claims 25-39 have been amended to incorporate previously indicated allowable subject matter, therefore the previous rejection has been withdrawn. Reasons for allowance are presented below.

Allowable Subject Matter

Claims 1-39 are allowed.

The following is an examiner's statement of reasons for allowance:.

Regarding claims 1-39, the prior art of teaches all of the recited structure of independent claims except side portions of side electrodes coplanar with side portions of the pixel electrodes along the surface of the insulating layer.

Nishiki teaches a liquid crystal display panel, comprising: a plurality of gate lines arranged along a first direction on a first substrate; a plurality of data lines arranged

Art Unit: 2871

along a second direction on the first substrate to cross the gate lines to define a plurality of unit pixels; an insulating layer disposed over the gate and data lines; a common electrode disposed on a second substrate opposite the first substrate; a plurality of pixel electrodes each pixel electrode provided in each of the unit pixels partitioned by the gate line and the data line; and a plurality of side electrodes overlapping the data lines along a length direction of the data lines, the side electrode in the pixel being extended to a neighboring pixel, wherein the insulating layer is provided between the side electrode and the data lines and a width of the side electrode is greater than a width of the data lines. Nishiki fails to teach these side electrodes having side portions coplanar with the pixel electrodes as they are found on an insulating layer above the pixel electrodes. Kim as previously cited teaches side electrodes that overlap the data lines however the width of these electrodes is explicitly less than that of the data lines.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
